

Interview Evaluation Report

Candidate: adarsh tiwari
Interview Type: Data Analyst - python
Date: 2026-06-24 16:17

Performance Summary

Category	Score
Overall Score	10/100
Technical Knowledge	2/25
Communication Skills	3/25
Problem Solving	2/25
Project Understanding	3/25

Strengths

- Acknowledged the use of pandas library
- Showed willingness to answer questions
- Participated in the interview process

Areas for Improvement

- Lack of knowledge in data analysis and manipulation
- Inability to provide specific examples from projects
- Limited understanding of data preprocessing techniques
- Need to improve communication skills to effectively convey thoughts
- Should be more prepared to discuss project details

Suggestions

- The candidate needs significant improvement in technical skills, particularly in data analysis and manipulation using Python and other tools. It is essential to review and practice data preprocessing techniques, data visualization, and database management. Additionally, the candidate should work on effectively communicating their thoughts and experiences, and be prepared to discuss project details and challenges. With dedication and practice, the candidate can enhance their skills and become a more competitive candidate in the field.

Interview Questions & Answers

Q1: In your work on the Global Super Store Dashboard, how did you apply data analysis skills to identify trends and patterns in the data using Python?

Answer: (The user skipped this question)

Score: 0/10 | Feedback: The user did not provide an answer to evaluate, making it impossible to assess their understanding or knowledge of the topic.

Q2: How did you utilize Pandas in Python to manipulate and analyze data in your projects, such as the Amazon Dashboard?

Answer: no i dont know

Score: 0/10 | Feedback: User did not provide any solution or attempt to solve the problem, indicating a lack of knowledge or understanding of the topic.

Q3: What data scaling techniques, including normalization, did you use to prepare data for analysis in your Global Super Store Dashboard project?

Answer: no i dont know

Score: 0/10 | Feedback: The user did not provide an answer, indicating a lack of knowledge or understanding of the topic. No technical evaluation is possible.

Q4: How did you leverage your Python skills to extract insights from large datasets, such as those encountered in your Amazon Dashboard project?

Answer: using pandas library

Score: 4/10 | Feedback: The user has identified a relevant library, pandas, which is often used for data manipulation and analysis. However, the answer lacks specificity and does not provide a clear solution to the problem. A more detailed answer would include how pandas can be used to solve the problem, such as using specific functions like `read_csv`, `groupby`, or `merge`.

Q5: Describe a time you had to analyze a large dataset, like the one in the Amazon Dashboard project, to extract insights using Power BI and Excel.

Answer: no i don't know

Score: 0/10 | Feedback: User did not provide a solution or attempt to solve the problem, lacking any technical detail or insight.

Q6: What data preprocessing techniques, such as data cleaning and data transformation, did you use to prepare data for analysis in your projects, including the Global Super Store Dashboard?

Answer: no i don't know

Score: 0/10 | Feedback: The user did not provide an answer, indicating a lack of knowledge or understanding of the topic. No technical evaluation is possible.

Q7: How did you approach exploratory data analysis in your Global Super Store Dashboard project, and what tools did you use, such as Excel or Power BI?

Answer: i didn't know

Score: 0/10 | Feedback: User did not provide a solution or attempt to solve the problem, lacking any technical insight or effort.

Q8: How did you handle missing data in the datasets you worked with in your Amazon Dashboard project, and what strategies did you use to impute or replace missing values?

Answer: i don't know

Score: 0/10 | Feedback: User did not provide any solution or attempt to solve the problem

Q9: How did you optimize memory usage when working with large datasets in Python, such as those encountered in your Global Super Store Dashboard project, to ensure efficient data analysis and visualization?

Answer: i didn't know

Score: 0/10 | Feedback: The user did not provide a solution or attempt to solve the problem, indicating a lack of knowledge or understanding of the topic.

Q10: How did you use MySQL to manage and analyze large datasets, such as those used in your Amazon Dashboard project, and what benefits did you see from using a relational database management system?

Answer: i didn't know

Score: 0/10 | Feedback: User lacked knowledge, no technical insight provided
